### **SECTION 4: First aid measures**

· 4.1 Description of first aid measures

General information Remove, decontaminate and dispose of soiled, soaked clothing

and shoes immediately.

· After inhalation Remove person to fresh air, keep warm, allow to rest; if breathing

is difficult, seek medical attention.

· After skin contact In case of contact with skin, preferably wash with polyethylene

glycol-based cleaner or clean with plenty of warm water and soap.

Consult a doctor in case of skin reactions.

· After eye contact Rinse the eyes with open eyelids for a sufficiently long time (at

least 10 minutes) with water that is as lukewarm as possible.

Consult an ophthalmologist.

After swallowing Do NOT induce vomiting. Rinse mouth with water. Medical

attention required.

 4.2 Most important symptoms and effects, both acute and

delayed

Information for the doctor: The product irritates the respiratory tract and is a potential trigger for skin and respiratory sensitisation.

Treatment of acute irritation or bronchial constriction is primarily

symptomatic. Depending on the extent of exposure and the

symptoms, prolonged medical treatment may be necessary.

 4.3 Indication of any immediate medical attention and special treatment needed No information available.

## **SECTION 5: Firefighting measures**

· 5.1 Extinguishing media

· Suitable extinguishing agents Use fire fighting measures that suit the environment.

5.2 Special hazards arising from the substance or

mixture No further relevant information available.

· 5.3 Advice for firefighters

• **Protective equipment:** No special measures required.

## SECTION 6: Accidental release measures

 6.1 Personal precautions, protective equipment and

emergency procedures Not required.

· 6.2 Environmental

precautions: No special measures required.

· 6.3 Methods and material for

containment and cleaning up: Absorb with liquid-binding material (sand, diatomite, acid binders,

universal binders, sawdust).

· 6.4 Reference to other

sections No dangerous materials are released.

### SECTION 7: Handling and storage

· 7.1 Precautions for safe handling

Ensure sufficient air exchange and/or extraction in the work areas. Air extraction is required for spray application.

For solid products: Avoid dust formation and dust deposits. Air limit values mentioned in section 8 must be monitored.

At workplaces where isocyanate aerosols and/or vapours can occur in higher concentrations, targeted air extraction must be used to prevent the occupational hygiene limit value from being exceeded. The air must be moved away from people.

For products containing solvents: Explosion protection required. The personal protective measures described in section 8 must be observed. The protective measures required when handling isocyanates must be observed. Avoid contact with skin and eyes and inhalation of vapours.

Keep away from food and beverages. Wash hands before breaks and at the end of work and apply skin protection ointment. Store

work clothes separately. Remove soiled, soaked clothing

immediately.

· 7.2 Conditions for safe storage, including any incompatibilities

Keep container dry and tightly closed. Further information on the storage conditions that must be observed for quality assurance

reasons can be found in our technical data sheet.

· Storage

· Requirements to be met by

**storerooms and containers:** Store only in the original container.

· Further information about

### SECTION 8: Exposure controls/personal protection

· 8.1 Control parameters

· Components with critical values that require monitoring at the workplace:

CAS: 14808-60-7 crystalline silica

• Additional information: The lists that were valid during the compilation were used as basis.

8.2 Exposure controls
Appropriate engineering

controls No further data; see section 7.

· Individual protection measures, such as personal protective equipment

· General protective and

hygienic measures Keep away from food, drink and animal feed.

Remove soiled, soaked clothing immediately. Wash hands before breaks and at the end of work.

Avoid contact with eyes and skin.

· Breathing equipment: Respiratory protection required at insufficiently ventilated

workplaces and when working with splashes. Fresh air masks or combination filters A2-P2 (EN529) are recommended for short-

term work.

If applicable, further recommendations for respiratory protection

can be found in the appendix.

In case of hypersensitivity of the respiratory tract (asthma, chronic

bronchitis), handling of the product is not recommended.

• Hand protection Suitable materials for protective gloves; EN 374:

Butyl rubber, nitrile rubber, chloroprene rubber (neoprene).

Note: suitable materials that provide sufficient protection for industrial cleaning with aprotic polar solvents (according to IUPAC

definition): butyl rubber.

In case of prolonged or frequently repeated contact, a glove with a protection class of 5 or higher is recommended (breakthrough time (Contd. on page 5)

greater than 240 minutes according to EN374). For short-term contact, a glove with a protection class of 3 or higher is recommended (breakthrough time greater than 60 minutes according to EN374).

The thickness of the material is not the only criterion for the level of protection of a glove against a chemical substance. The protective effect also depends to a large extent on the type of glove material. Depending on the type and material, the thickness must be more than 0.35 mm to ensure adequate protection in the event of prolonged and frequent contact. Exceptions to this rule are multilayer gloves, which guarantee sufficient protection even with a thickness of less than 0.35 mm during prolonged wear. Other glove materials with a thickness of less than 0.35 mm only provide sufficient protection for short periods of wear.

For solvent-free products:

Example:

Polychloroprene - CR: thickness ≥0.5mm; breakthrough time

*≥*480min.

Nitrile rubber - NBR: thickness ≥0.35mm; breakthrough time

≥480min.

Butyl rubber - IIR: thickness  $\ge$ 0.5mm; breakthrough time  $\ge$ 480min. Fluoro rubber - FKM: thickness  $\ge$ 0.4mm; breakthrough time

≥480min.

Recommendation: Dispose of contaminated gloves.

· Material of gloves

Polychloroprene - CR Nitrile rubber - NBR Butyl rubber - IIR Fluoro rubber - FKM

· Penetration time of glove material

Polychloroprene - CR: thickness ≥0.5mm; breakthrough time

*≥*480min.

Nitrile rubber - NBR: thickness ≥0.35mm; breakthrough time

≥480min.

Butyl rubber - IIR: thickness  $\geq$ 0.5mm; breakthrough time  $\geq$ 480min. Fluoro rubber - FKM: Thickness  $\geq$ 0.4mm; Breakthrough time

≥480min.

· Eye/face protection · Body protection:

Safety goggles with side protection in accordance with EN 166.

Use chemical-resistant protective clothing.

In case of hypersensitivity of the skin, handling the product is not

recommended.
