· Hand protection	(Contd. of page 4) Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation
· Material of gloves	You can find help with choosing gloves on the website https:// www.bgbau.de/fileadmin/Gisbau/Projekte.pdf For example, we recommend the Sol-vex 37-900 protective gloves from Ansell GmbH. The breakthrough time of the protective gloves can be found under point 8 "Penetration time of the glove material". The selection of a suitable glove depends not only on the material, but also on other quality features and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of glove materials cannot be calculated in advance and must therefore be checked before use. Nitrile rubber Recommended material thickness:≥ 0.4 mm
. Ponotration time of alove	
Penetration time of glove motorial	The breakthrough times of the Sel yey 27,000 protective gloves
material	The breakthrough times of the Sol-vex 37-900 protective gloves are around 8 hours. The following applies to all other gloves: The exact breakthrough time must be obtained from the protective glove manufacturer and adhered to. Nitrile rubber Material thickness: ≥ 0.40 mm Penetration time: ≥ 480 min Butyl rubber: Material thickness: ≥ 0.5 mm Penetration time: ≥ 480 min
· Eye/face protection	Tight-fitting safety goggles. Safety goggles.
• Body protection:	Protective clothing Suitable protective clothing should be worn when working with epoxy resins. In addition to normal work clothing (long trousers, long-sleeved shirt or T-shirt), disposable overalls, aprons, overshoes, sleeve protectors etc. may be necessary depending on the activity. Uncovered areas of skin should be avoided as far as possible, even in hot weather. If the work involves kneeling, the lower leg area should be protected by protective trousers.
